

Task 6P

Solve the following set of problems using Python and submit the code file with extension .ipynb.

-
1. Load the [MNIST Digit dataset](#), show the size of the training and test set.
 2. Develop a one hidden layer multi-layer perceptron model on the above training data, report the accuracy of the model.
 3. From question 2, set the number of hidden layers of the MLP model as [2,4,6,8,10], set the hidden layer size as 100, show the accuracies on the test set.
 4. From question 2, for the hidden layer set the hidden layer size as [50, 100, 150, 200], show the accuracies on the test set.
 5. Based on question 3 and 4, explain the key findings.

Assessment feedback

The results with comments will be released within 5 business days from the due date.

Referencing

You must correctly use the IEEE method in this assessment. See the [referencing guide](#).

Academic integrity, plagiarism and collusion

Plagiarism and collusion constitute extremely serious breaches of academic integrity. They are forms of cheating, and severe penalties are associated with them, including cancellation of marks for a specific assignment, for a specific unit or even exclusion from the course. If you are ever in doubt about how to properly use and cite a source of information refer to the referencing site above.

Plagiarism occurs when a student passes off as the student's own work, or copies without acknowledgement as to its authorship, the work of any other person or resubmits their own work from a previous assessment task.

Collusion occurs when a student obtains the agreement of another person for a fraudulent purpose, with the intent of obtaining an advantage in submitting an assignment or other work.

Work submitted may be reproduced and/or communicated by the university for the purpose of assuring academic integrity of submissions:
